

STARCOMMS EXTENDS COVERAGE TO WARRI

Starcomms Plc has extended its ever-growing network of coverage cities to the oil-rich city of Warri, Delta State. This extension comes straight on the heels of its recent successful launches in Shagamu and Ijebu Ode all in Ogun State, and is in addition to its operations in over 16 cities across the nation.

Starcomms Plc, Nigeria's fourth largest telecom operator and leading 'triple-play' (mobile, fixed wireless voice and wireless broadband) provider has consistently shown commitment towards innovation and improvement of the quality of service which it renders to its subscribers variously in the form of new technologies, products, packages and promotions all tailored to provide seamless communication.

With its launch in Warri, Mr. Maher Qubain CEO Starcomms said subscribers are in for the best service available in the form of telecommunication. This is borne out of the belief by Starcomms that the art of communication should not be the preserve of a few, but the preserve of all.

In this light, he promised that a range of product categories will be available for subscribers to choose from. These include: Mobile oneX CDMA Internet service, Smart Centre and value added services.

Starcomms new SIM enabled 07029 & 07028 mobile service would enable customers' stay connected within and outside the city, thus creating a high mobility.

One of such opportunities is easy and quick access to streaming video, movies, online music and live updates of business news and sports. With the oneX CDMA internet access, subscribers can quickly upload large data files and emails with attachments while 'on the go'.

Starcomms Smart Centre initiative remains the company's flagship contribution to entrepreneurial development in Nigeria. It is a concept in pay phone business, which gives access to business centre operators to make more profit and greater opportunity to tap into the cutting edge technology which Starcomms avails.
